SUMMARY

Full-stack software engineer with 4+ years of experience building workforce planning, logistics, and internal platform systems at Amazon using AWS, Java, Python, TypeScript, and React.

EXPERIENCE

Amazon

Software Development Engineer 2

Vancouver, BC

July 2022 – Present

- Designed and launched workforce planning infrastructure powering Blueprint, Amazon's organizational structure planning platform, aggregating headcount metrics for **38,000+ organizational positions** and enabling leaders to model large-scale reorganizations while reducing planning delays by up to **6 weeks**
- Owned end-to-end delivery of Segmentation for Amazon's enterprise headcount and financial Workforce Planning platform, building role-based capabilities across a React front end, REST BFF, and GraphQL/AppSync + DynamoDB backend. Led the product from beta through UAT to launch with zero high-severity incidents across **160+ senior (OL3) organizations**, enabling **162 HR and Finance users** to create **624 organizational segments in 8 weeks (+207% MoM growth)** and replacing spreadsheet-driven planning for **~\$70B** in annual workforce investment
- Solved multi-million-dollar annual import duty overpayment by designing automated vendor rebate integration into cross-border shipping invoices, reducing declared values by **10–15%**. Implemented event-driven architecture processing **42M+ daily events**, weighted cost calculations across vendor agreements, and automated compliance document generation with full audit trails
- Developed a highly configurable Java-based service using AWS Lambda, S3, and DynamoDB to centralize PDF generation for cross-region shipment reporting, scaling to **4,000+** transactions daily while meeting diverse legal and tax requirements
- Led zero-downtime migration of a critical orchestration platform using A/B testing, executing over **500,000** workflows post-launch and improving error visibility, reliability, and roadmap prioritization
- Implemented proactive monitoring and automated kill-switch mechanisms for critical Lambda services, preventing downstream failures by halting order processing before system-wide impact
- Designed and developed a full-stack internal AWS Step Functions utility enabling mass re-drives and execution querying, reducing developer troubleshooting time and supporting **5,000+** weekly executions across multiple services

Castlight Health

Software Engineering Intern

San Francisco, CA (Remote)

May 2021 – August 2021

Molecula

Software Engineering Intern

Austin, TX (Remote)

May 2020 – August 2020

PROJECTS

Titans of Investing (titansofinvesting.net)

May 2022 – Present

- Designed and implemented a full-stack web platform for a global finance organization, supporting membership management, events, and curated content discovery
- Built a semantic search platform using vector embeddings, enabling members to discover and query book reports beyond traditional keyword-based search
- Developed and deployed the frontend using Next.js and React on AWS Amplify, and implemented authentication and user management with AWS Cognito; built backend services in Python using AWS Lambda, Step Functions, and PostgreSQL, serving **800+** members worldwide

RELEVANT SKILLS

Languages: Python, Java, TypeScript, JavaScript, Kotlin, SQL

Frameworks & Technologies: React, Next.js, Node.js, GraphQL, Docker

Tools: Git, Linux, REST APIs

AWS: CDK, Lambda, Step Functions, DynamoDB, S3, AppSync, OpenSearch, Glue, Athena, Redshift, SQS/SNS, ECS/EC2

EDUCATION

Texas A&M University

Bachelor of Science in Computer Science | Cum Laude

Certificate in Holistic Leadership

College Station, TX

August 2018 – May 2022
